# POS Payment Module for Checkout Flex and All-in-One

## Flexible and simple solutions for on-site payment collection

A terminal for on-site payment collection is less effort than you might think. These days, a terminal can be configured very easily in just a few clicks. The right payment methods for your customers have to be integrated separately.

With our POS Payment Modules for **Checkout Flex** or **Checkout All-in-One,** we offer two different options for integrating our PAX terminals into your checkout solution.

## Why use the POS Payment Module for Checkout All-in-One?

For small retailers, we recommend the POS Payment Module for Checkout All-in-One with one of our modern PAX terminals. You benefit from only having to conclude one contract for all payment methods and from receiving the preconfigured payment methods at a standard transaction fee of 1.7 percent.

We are happy to handle the administrative work involved in concluding the contract for the various payment methods.

## Why use the POS Payment Module for Checkout Flex?

For medium and large retailers, we recommend the POS Payment Module for Checkout Flex with one of our modern PAX terminals. This gives you plenty of freedom in your choice of acceptance partner and the range of payment methods. Via our Checkout back office, you can request quotations from the integrated acceptance partners and receive individual quotations directly, with conditions that vary from one payment method to the next.

**New with Checkout Flex:
preconfigured basic payment methods**
We can offer preconfigured basic payment methods via the acceptance partners Wallee/SnapSwap. You also benefit from the fact that operational activation takes just five working days 1 and that you know the transaction fees before the contract is concluded.
