

## Focus Global

If you opt for the Global focus, your investments will be diversified worldwide, and you will benefit from differing economic cycles, interest rate levels and currencies.

The world is interconnected, and any information on the capital markets has global ramifications. How intense these ramifications are, however, depends on individual economies, currency areas, industry structures and interest rates. Investors who choose this investment focus benefit from broad diversification across the globe. For further diversification, additional investments are made in Swiss real estate and gold. Foreign currency risks are hedged – completely in the case of bonds, and partly in the case of gold.
