

06 – Notification texts and BTC codes

The current notification texts may change as of 30 June 2020. Processes based on these texts need to be reviewed and modified if necessary. The currently deployed ISO codes (BTC) will continue to be used.

What is this about and what does it mean for you?

The notification texts in all formats may change as of 30 June 2020. If you process these notification texts automatically (known as parsing), please make the necessary changes in your software and

processing operations. Below you will find a list of some relevant notification texts and BTC codes. This list is not exhaustive.

Use case	Current notification text	Notification text valid from 30 June 2020	BTC
Batch credit with IS	IS batch credit		
Batch credit with IBAN from QR bill	n/a	Batch credit account <IBAN>	PMNT RCDT AUTT
Batch credit with ISR	Batch credit ISR <ISR-SN>	Batch credit ISR <ISR-SN>	PMNT RCDT VCOM
Batch credit with QR-IBAN	n/a	Batch credit account <QR-IBAN>	PMNT RCDT VCOM

Changes to be checked in your systems and processes

From 30 June 2020 (for all customers – deadline)

What is changing?

Modified notification texts may be delivered from 30 June 2020. This affects all formats. This may have an effect on your software and processing operations if you use the notification texts for processing.

What needs to be done?

Please check if any changes are required in your processing operations, in your software or with your software partner.

If you currently use parsing for the notification texts, your parameters will need to be adjusted. However, PostFinance recommends avoiding the parsing of notification texts and advises instead that you use the ISO codes (BTC) in your processing operations.

With conversion to QR bill

If you currently interpret notification texts (parsing), we recommend that you use only the ISO codes (BTC) in your processing operations with the switch to the QR bill.
